

# Vitals over Video v2.1

## Human BioMetrix Software for Machines

### Pitch Deck

Software that Gives Machines the Ability to Recognize the Following in Humans...

Blood Pressure

Pulse

Pulse-Oximetry

Body Temperature

Pre-Falling

Pre-Cardiac

Pre-Stroke

Upper Respiratory  
Illness

## **About Our Company...**

Clay Medical Robotics Inc. is a US based startup company that focuses on developing AI applications with a focus on healthcare for the military and civilian sectors. Since 2016 the Company has been building a humanoid robot called “CORE-P” (Common Robotic Exploratory Platform). The idea behind CORE-P is to develop software and systems that will allow machines to accurately take human vitals including blood pressure, pulse, pulse oximetry and body temp by looking at human beings. Further recognizing  
1.) Pre-Fall, 2.) Pre-Stroke 3.) Pre-Cardiac 4.) Upper respiratory illness in human adults and children.

We are seeking an investment of \$10M USD to build out this software for the Omniverse/STARGATE. Our goal is to have Vitals over Video be the main way that Robots and machines interacting with the STARGATE make healthcare predictions about humanity. Our system will involve using our proprietary patent pending method of obtaining human vitals and hosting key algorithms in a cloud based Architecture (Server) where machines will be our “Clients”.

## What is Vitals over Video?

Vitals over Video (VoV) is;

- 1.) a proprietary method of obtaining human vitals statistics (blood pressure, pulse, pulse oximetry and body temp. Patents pending.
- 2.) a proprietary method of recognizing; a.) Pre-Fall, b.) Pre-Cardiac, c.) Pre-Stroke and d.) Major upper respiratory illness in children and adults. Patents pending.
- 3.) a cloud based host/server for health care monitoring and diagnosis machine learning algorithms for robot clients.
- 4.) the Future of Telemedicine and Remote Patient Monitoring.

Human BioMetrix Software for Machines

A Track Record of Successful Project Development..  
2022 CMS Approval of Remote Patient Monitoring Hardware

# Vitals over Video v2.1

## Human BioMetrix Software for Machines

...Software has origins in non -contact polygraph software developed for US Military.

# Vitals over Video v2.1

Human BioMetrix Software for Machines

...Years of R&D have been conducted in converting human emotional states to binary and teaching machines to recognize these conditions In humanity using computer vision (AI). Patents Pending.

### **What we are looking for...**

We have successfully tested Version 1 of our Software, and are looking to create an updated version with cloud capability to act as a Client/Server role for machines. Our Goal is to finish developing Vitals over Video 2.1 to Become the standard method for remote patient monitoring in the STARGATE System.

### **Seeking a \$10,000,000 (10 Million USD) investment...**

- |                 |                                     |
|-----------------|-------------------------------------|
| 1. \$6,000,000. | Software Build-out and Integration. |
| 2. \$2,000,000. | Testing, Validation and Approvals.  |
| 3. \$2,000,000. | Deployment to the Cloud.            |
